

Can you make a Voki scene appear in [FULL SCREEN](#)?

Yes, you can!

If you've ever wanted to view a Voki in full-screen mode, there is a really neat trick we'd like to share with you. This can be useful for presentations, for those who are visually impaired, and just as a cool trick that you can teach others.

Follow the steps below to make your Voki full screen!

Note: The code may look overwhelming but if you follow these steps, playing your Voki in full screen will be a breeze.

1. In My Voki, click on the Voki you want to display.
2. Click the 'Publish' button.
3. Copy the embed code and Paste into any word processing document.

Now, here's the fun challenge... You need to be a little bit of a sleuth and pick out the right part of the code:

Tip: This is a great student exercise in attention to detail.

1. A few lines from the bottom of the code, you should see a URL (`http://`) in quotes
2. Copy the URL beginning with: `http://vhss-d.oddcast.com/vhss_editors/voki_player.swf?doc=` (do not include the quotation marks) and ending with a number before the word "quality"
3. Paste the URL into your browser and click Go

That's it! If you copied the URL correctly, your Voki will now load in Full Screen mode.
